The Alfa Gamma Group is a privately owned conglomerate of companies engaged in harvesting, processing, exporting and marketing fresh and frozen ocean-caught seafood from Central and South America.

Our ownership provides control of product from point of harvest to point of delivery that allows us to meet our customers' demand for total transparency with regard to source, fishery management, harvest method and supply chain.

We operate over 400 harvest vessels in five countries, ranging from 22 foot open "pangas" with 500 pound ice holds, to 85 foot longline vessels, to 200 foot tuna super purse seiners, all operating in the Caribbean Sea, Atlantic and Pacific Oceans.

We own processing plants, holding freezers, truck fleets and distribution centers in the United States, Ecuador, Panama, Nicaragua, Mexico and Suriname to facilitate the logistics of delivering our product to the world's markets.

The complete control of the entire operation from the fisherman to the end user gives us the ability of adapting to each specific market and fulfilling our customer's demands.
